Operating Expenses				

FRx® (Financial Report Extender) for Windows® Report Writer software (Standard Version) is included with the MAS 90® General Ledger module. FRx for Windows is a full-featured, Windows 98® compatible graphical financial reporting tool.

With FRx, the ability to specify row and column formats independently maximizes the flexibility of report formats. Combine formats with a custom report tree that matches your company's chart of accounts structure. Using the FRx drag and drop feature, you can restructure your cost centers, or carve out new account segments not possible in your standard General Ledger, using a special "Clever" tool. After creating a report, you can print it, export it to an Excel® worksheet, drill down to examine the details, or distribute it via e-mail.

FRx is recognized as a "best-of-breed" financial report writer, and is a market leader with more than 65,000 installations worldwide, 8,000 of which use MAS 90. FRx is also a critical success, and was recently named one of Accounting Today's "Top 100 Accounting Software Products."

FRx Advanced Version

The FRx Advanced Version can be obtained through your Sage Software reseller for an additional fee. The Advanced Version offers added reporting tree and reporting level flexibility, plus links allowing you to include external spreadsheet data in reports. You can also generate multi-company consolidation reports with FRx Advanced.

See reverse side for list of features

FEATURES

Standard Version Features

MAS 90 Integration	The FRx link to MAS 90 allows you to build General Ledger lists automatically, and pull your accounting data directly from MAS 90.
Graphical Formatting	FRx allows you to change fonts and colors, for professional-looking report printing.
Drill-Down	With FRx, it's simple to drill-down to transaction-level detail. Used in tandem with a less expensive remote drill-down viewer, FRx allows users away from the office to view reports direct from e-mail, performing extended drill-down navigation.
Roll-up	The functional opposite of drill-down, roll-up allows you to consolidate business units, yielding combined totals and other information.
Unposted Data	Before posting data, perform a "what if" analysis on your data to determine the effects the transactions will have on your ledger.
Export	FRx offers straightforward exporting of formulas and values, from reports to your favorite spreadsheet (e.g., Microsoft® Excel® or Lotus® 1-2-3®).
Cleaver	Use the special Cleaver tool to resegment accounts or carve out new account structures.
Drag and Drop	You can precisely move reporting units from parent to child positions and vice-versa, with standard Windows drag and drop functionality.
Account Types	FRx supports account types, for proper management of debit and credit amounts.
Access 8 Database	Multi-user environments can experience increased stability in large drill down view (DDV) files.
32-Bit Application	Take advantage of high client and server-side transaction processing speeds to increase efficiency.
Printing Options	The Print Immediately feature automatically prints a hard copy to the default printer in addition to the selected output, and the collate option enables you to print (or collate) multiple copies.

Advanced Version Features

Multi-User File Locking Capabilities	Building block locking can prevent your row and column formats from being modified by another user.
Report Launcher	Use Report Launcher to quickly print any existing FRx report. Encrypt DDV and Excel data via OLE output options with a password.
Spreadsheet Link	Your reports can include links to external spreadsheet data.
Reporting Trees	FRx Advanced gives you an unlimited number of trees (Standard is limited to one).
Reporting Levels	FRx Advanced gives you nine reporting levels in trees (Standard is limited to two).
Multi-Company Consolidations	MAS 90 users gain the ability to generate multi-company consolidation reports from within FRx when they purchase the Advanced Version.
Security	Secure companies, rows, columns, trees and/or catalogs at the user and/or group level.
Account Sets	Group sets of accounts under one name, then refer to and update the entire account set in a few easy steps.
MAPI E-mail Support	Send reports as attachments or include a link to a file stored on a shared server to predefined e-mail groups. The Demand Page viewing feature sends only the requested information.
